

**Liver Transplantation for Unresectable Neuroendocrine Tumour Liver Metastases:
Central MDT Members and Responsible Clinicians Contract**

Liver transplantation for NET LM is being performed as a pilot programme. The safety and success of the programme will depend on the expertise and commitment of involved clinicians. It is imperative that they understand the basics of NET management and liver transplantation so that we can gather evidence of transplant benefit.

NETs are rare cancers that are poorly studied due to lack of funding for research. This pilot provides a perfect opportunity for raising the profile of NET patients to attract funding for high quality research and trials. Delivering on this potential will rely on diligence and commitment of involved clinicians to provide the necessary data and participate in audits, trials and basic research. Clinicians shall only be allowed to participate in the pilot if they can commit to these requirements.

I From hereby agree to:

- Develop and maintain expertise in the field of Neuroendocrine Tumours through membership of the professional societies UKINETS and ENETS, and attendance at one or more major NET conferences a year.
- Develop and maintain basic understanding of Liver Transplantation and Transplant Oncology through membership of SIGTO, regular attendance at its meetings and participation in my patients' discussions at Liver Transplant listing meetings.
- Provide required data to the National MDT.
- Identify appropriate patients and manage them through the transplant pathway.
- Ensure fairness and equity of access to liver transplantation.
- Facilitate audit and research.
- Facilitate bio-banking of blood, tissue and other samples.
